

Cygnus Testimonials

Service Business Forms /

“Why do we use Cygnus for all of our Data processing? Not a difficult question to answer. Cygnus has many standard multi- functions, which solve the less complex problems and by means of simple programme instructions, splurges, (the technical term,) that solve the complicated ones. All this is visually shown, so that anyone can see what has happened in the process.

Support is always on hand if you need it, and the software is regularly updated with “new goodies”.

Overall, the package is exactly right for us, and on top of that the people are nice to deal with.”
